SKILLS

Programming & Scripting: Python, Java, PySpark, Shell Scripting, Node.js
Databases & Data Warehousing: Oracle SQL, Hive, Snowflake, Databricks, Iceberg
Big Data & Cloud Platforms: HDFS, AWS S3, AWS EC2, AWS SQS, AWS EKS, AWS IAM, AWS VPC, Cloud Data Lake
Data Engineering & Orchestration: ETL / ELT Pipelines, Apache Airflow, Data Ingestion, Data Migration
Containers & DevOps: Docker, Kubernetes, OpenShift
Web Technologies: HTML, CSS, JavaScript, TypeScript, Angular
Core Concepts: OOPS, DBMS, APIs, Big Data Processing, Data Quality, Data Validation, Data Governance.

WORK EXPERIENCE

Citicorp CSC, India

US Personal Banking – Datalake Team **Aug 2025 – Present**

- Worked on enterprise-scale Big Data platforms for Citi consumer banking data-sharing use cases, developing Spark-based ELT pipelines on Kubernetes to process continuously growing volumes of raw data stored in AWS S3 (~2,000 TB to date) and ingest data into downstream platforms, including Snowflake, Databricks, and Apache Iceberg, to support analytics and reporting.
- Built an autonomous L3 AI agent that resolves production failures and optimizes Spark resource allocation.
- Led the migration of the data lake infrastructure between AWS regions and enabled the cloud infrastructure to support Iceberg pipelines.
- Led the migration of Snowflake across editions.
- Automated production pipeline monitoring, data processing, and data quality validation to support reliability, accuracy, and regulatory compliance.
- Handled high-priority, infrastructure-related production incidents on a regular basis.

KYC Database Team **Jul 2024 - Jul 2025**

- Designed, developed, and optimised Python-based ETL pipelines for data extraction, transformation, and processing, improving efficiency and reliability; contributed to migrating Talend workflows to Python for enhanced flexibility, maintainability, and integration.
- Managed Oracle-to-Hive data migration, including extraction, transformation, and transfer, ensuring data accuracy, consistency, and reliability across source and target systems.
- Developed and maintained a Node.js full-stack web application for static data patching and database maintenance, delivering $80K+ in cost savings by reducing manual effort and operational overhead; owned end-to-end application coordination, feature enhancements, production support, troubleshooting, and stakeholder collaboration.
- Dockerised and deployed the application on OpenShift, enabling scalable and portable deployment; applied Python, SQL, ETL, and data-processing expertise across large-scale data workflows.

SG Interface KYC ETL Team - Internship **May 2023 - Jul 2023**

- Developed ETL-based reporting solutions to support business insights.
- Conducted feed validation and data quality checks to ensure accuracy, consistency, and compliance with reporting standards.

EDUCATION

Oct 2020 - May 2024

Bachelor of Technology in Information Technology **CGPA : 9.0**

Madras Institute of Technology, Anna University , Chennai

- Strong foundation in OOPS, DBMS, Operating Systems, Cloud Computing, Big Data, and AI concepts.
- Served as President of Finance, Entrepreneurship Club – organized technical and cultural events.
- Winner of multiple coding competitions and hackathons.
- Merit-based Scholar – TEMENOS, Banking Software Company.

KEY PROJECTS

- Enhancing Image Generation Using Autoencoders and Transformer-Based Generation, IEEE, Aug 2024.
- Department Inventory Tracker : Built a web-based system connecting to DB. Implemented automated Excel report generation along with bill/invoice uploads, tracking, and asset updates.
